PROFESSIONAL SUMMARY

I'm a Data Engineer with three years of experience building and maintaining data pipelines that process millions of records daily. I started my career with a keen interest in Python and SQL, and have since developed solid expertise in cloud platforms and ETL workflows. I enjoy solving practical data problems and have a track record of improving system performance and reliability. I'm comfortable working independently or as part of a team and I'm always looking to deepen my knowledge of distributed systems.

WORK EXPERIENCE

Senior Data Engineer

DataStream Solutions

www.datastreamsolutions.io

Leeds, United Kingdom

March 2023 - Present

Designed and deployed production data pipelines using Apache Airflow that process 50 million records daily from multiple API sources into Snowflake data warehouse, reducing manual ETL tasks by 40 percent.

Optimised existing SQL queries and implemented partition strategies that decreased query execution time by 35 percent, significantly improving dashboard refresh times for business intelligence team.

Mentored a junior data engineer on best practices for Python development, code reviews, and troubleshooting data pipeline failures, contributing to their promotion to mid-level engineer.

Built comprehensive data validation framework using Great Expectations to catch data quality issues upstream, preventing corrupt data from reaching downstream analytics teams.

Data Engineer

Insight Analytics Ltd

www.insightanalytics.co.uk

Leeds, United Kingdom

July 2021 - February 2023

Developed and maintained 12 ETL pipelines using Python and PostgreSQL that ingested data from SaaS applications and internal databases, serving 50 plus business users daily.

Migrated legacy data warehouse from on-premises infrastructure to AWS Redshift, reducing infrastructure costs by 30 percent and improving query performance for historical analysis.

Collaborated with data analysts to troubleshoot production incidents and implemented monitoring dashboards using CloudWatch, reducing mean time to resolution from 4 hours to 45 minutes.

Created documentation and runbooks for data pipeline deployment and maintenance procedures, enabling knowledge transfer across the data team and reducing onboarding time for new hires.

Junior Data Engineer

TechVenture Corp

www.techventurecorp.net

Leeds, United Kingdom

September 2020 - June 2021

Built initial data pipelines using Python and scheduled batch jobs with cron to extract data from REST APIs and load into PostgreSQL databases supporting internal analytics.

Wrote and maintained SQL queries for ad hoc analysis requests from product and finance teams, producing reports that influenced pricing strategy decisions.

Participated in sprint planning and daily standups within an agile team of eight engineers, learning version control with Git and collaborative development practices.

Assisted senior engineers in debugging data pipeline failures and documented root causes and resolutions in internal knowledge base for team reference.

EDUCATION

Bachelor of Science in Computer Science

University of Leeds

Leeds, United Kingdom

Graduated: June 2020

SKILLS

Programming Languages: Python, SQL, Bash

Data Platforms: Snowflake, Apache Airflow, AWS Redshift, PostgreSQL

Cloud Services: Amazon Web Services (AWS), EC2, S3, CloudWatch

Data Processing: Pandas, NumPy, PySpark

Tools and Technologies: Git, Docker, JIRA, Great Expectations

Databases: PostgreSQL, MySQL, NoSQL basics

Other: ETL design, data warehousing, API integration, debugging
