PROFESSIONAL SUMMARY

Backend engineer with 5 years of experience building scalable APIs and microservices for fintech and e-commerce platforms. Spent the last few years working with Python and Go to design systems that handle millions of requests daily. I enjoy solving database performance problems and mentoring junior developers. Currently looking for a role where I can take on more architectural responsibilities.

TECHNICAL SKILLS

Languages: Python, Go, Java, SQL

Databases: PostgreSQL, MongoDB, Redis, Elasticsearch

Cloud Platforms: AWS (EC2, RDS, Lambda, SQS), Google Cloud

Message Queues: RabbitMQ, Kafka

Frameworks: Django, FastAPI, Gin

Tools and Platforms: Docker, Kubernetes, Git, Jenkins, Terraform

Testing: pytest, unittest, integration testing

APIs: REST, GraphQL

WORK EXPERIENCE

Senior Backend Engineer

Fintech Solutions Ltd

London, United Kingdom

www.fintechsolutions.io

March 2023 - Present

Led the redesign of our payment processing service from a monolith to microservices, reducing latency by 40% and improving throughput to handle 10k transactions per second. Mentored two junior engineers on Python best practices and code review standards, resulting in measurable improvements in code quality metrics. Built a real-time fraud detection service using Kafka and machine learning model integration that flagged suspicious transactions with 95% accuracy. Architected a caching layer using Redis that decreased database load by 60% during peak trading hours.

Backend Engineer

Velocity Commerce

Cambridge, United Kingdom

velocity-commerce.co

June 2021 - February 2023

Developed and maintained REST APIs for an e-commerce platform handling 2 million daily active users and 50k orders per day. Optimized critical database queries that were causing bottlenecks, reducing average response

times from 800ms to 200ms. Implemented a background job system using Celery and RabbitMQ for asynchronous order processing and email notifications. Collaborated with the DevOps team to containerize services with Docker and deploy them on Kubernetes, improving deployment consistency across environments.

Junior Backend Engineer

DataHub Innovations

Cambridge, United Kingdom

datahub-innovations.net

August 2019 - May 2021

Built and deployed REST APIs using Django and Django REST Framework that powered mobile and web applications for data analytics clients. Wrote and maintained unit and integration tests achieving 85% code coverage across the backend codebase. Contributed to database schema design and migration strategies for PostgreSQL, working with legacy data structures to support new features without downtime. Participated in on-call rotation supporting production services, debugging issues and implementing fixes within SLA requirements.

EDUCATION

Bachelor of Science in Computer Science

University of Cambridge

Cambridge, United Kingdom

Graduated: June 2019

GITHUB REPOSITORIES

https://github.com/jamescarter92/payment-service-sdk

Python SDK for integrating with payment processors, includes retry logic and rate limiting. 340 stars.

https://github.com/jamescarter92/query-optimizer

Go tool for analyzing PostgreSQL query performance and suggesting indexes. 210 stars.

https://github.com/jamescarter92/api-rate-limiter

Distributed rate limiter implementation using Redis, compatible with FastAPI and Flask. 180 stars.

https://github.com/jamescarter92/kafka-consumer-template

Boilerplate project for building Kafka consumers in Python with error handling and monitoring. 95 stars.
