PROFESSIONAL SUMMARY

Data scientist with 7 years of hands-on experience building machine learning models and analytics systems for financial services and tech companies. I started my career analyzing customer behaviour for retailers, then moved into predictive modelling for banks where I developed fraud detection systems that caught millions in losses. These days I focus on mentoring junior analysts and architecting data pipelines that actually get used by business teams rather than collecting dust.

WORK EXPERIENCE

Senior Data Scientist

DataFlow Analytics

www.dataflow.io

London, United Kingdom

March 2022 - Present

Led development of a customer churn prediction model that reduced monthly customer attrition by 12 percent, saving the company approximately 2.3 million in annual revenue.

Designed and implemented an automated feature engineering pipeline using Python and Apache Spark, reducing model development time from 6 weeks to 2 weeks for new projects.

Mentored a team of 4 junior data scientists, establishing best practices for code review, model validation, and documentation standards across all analytics projects.

Collaborated with product and engineering teams to deploy 8 machine learning models to production, establishing monitoring systems that track model drift and performance degradation in real time.

Data Scientist

FinTech Solutions Ltd

www.fintechsol.net

Edinburgh, United Kingdom

June 2019 - February 2022

Built and deployed a fraud detection system using gradient boosting that identified 94 percent of suspicious transactions while maintaining a false positive rate below 2 percent.

Conducted statistical analysis on transaction datasets containing over 500 million records, identifying patterns in customer spending behaviour and anomalies that led to new business intelligence insights.

Created interactive dashboards using Tableau and SQL, providing senior management with daily KPI tracking and weekly trend analysis across multiple business units.

Developed Python scripts to automate data cleaning and validation processes, eliminating 30 hours of manual work per month and improving data quality scores from 87 percent to 96 percent.

Data Analyst

RetailMetrics Ltd

www.retailmetrics.co

Glasgow, United Kingdom

July 2017 - May 2019

Analysed customer transaction data to identify purchasing patterns, resulting in 3 targeted marketing campaigns that increased average customer lifetime value by 18 percent.

Built predictive models using logistic regression and decision trees to forecast product demand, improving inventory planning accuracy by 22 percent across 45 store locations.

Processed and visualized large datasets using SQL and Python, producing weekly reports that informed merchandising decisions and promotional strategies.

Established data quality checks and validation procedures that caught errors in upstream systems, improving downstream analytics reliability by 28 percent.

EDUCATION

University of Edinburgh

MSc Data Science

2016 - 2017

University of Glasgow

BSc Mathematics with Statistics

2012 - 2016

TECHNICAL SKILLS

Programming Languages: Python, R, SQL, Scala

Machine Learning: Scikit-learn, XGBoost, TensorFlow, Keras, Random Forests, Gradient Boosting, Neural Networks

Data Engineering: Apache Spark, Apache Hadoop, Pandas, NumPy

Databases: PostgreSQL, MySQL, MongoDB, Cassandra

Data Visualization: Tableau, Matplotlib, Seaborn, Plotly

Cloud Platforms: AWS (EC2, S3, SageMaker), Google Cloud Platform (BigQuery, Dataflow)

Big Data Tools: Hadoop, Hive, PySpark

Statistical Methods: Hypothesis Testing, Regression Analysis, A/B Testing, Time Series Analysis

Version Control: Git

Other: Jupyter Notebooks, Linux, Agile Methodologies
