PROFESSIONAL SUMMARY

I'm a DevOps engineer with five years of experience building and maintaining infrastructure for mid-sized tech companies. I've spent most of my career automating deployment processes and reducing operational overhead through better tooling and monitoring. I'm most interested in working with containerisation and cloud platforms, and I enjoy mentoring junior team members when the opportunity comes up.

WORK EXPERIENCE

Senior DevOps Engineer

TechVault Solutions

techvault.io

Edinburgh, United Kingdom

March 2022 - Present

Designed and implemented a Kubernetes cluster migration that reduced infrastructure costs by 35 percent while improving deployment frequency from bi-weekly to daily releases.

Established comprehensive monitoring and alerting systems using Prometheus and Grafana, reducing mean time to detection for production issues from 45 minutes to 8 minutes.

Developed Infrastructure as Code using Terraform to manage AWS resources across development, staging, and production environments, enabling consistent and repeatable deployments.

Mentored two junior engineers on Docker best practices and CI/CD pipeline design, conducting weekly knowledge-sharing sessions and code reviews.

DevOps Engineer

DataStream Analytics

datastream.co

Glasgow, United Kingdom

June 2020 - February 2022

Built and maintained CI/CD pipelines using Jenkins and GitLab CI, automating testing and deployment processes for a team of 12 developers.

Managed multi-region AWS infrastructure including EC2, RDS, and S3 services, implementing cost optimisation strategies that reduced monthly cloud spend by 28 percent.

Created runbooks and disaster recovery procedures for critical services, conducting regular failover drills and reducing recovery time objectives from 4 hours to 30 minutes.

Collaborated with the security team to implement infrastructure hardening measures, including VPC configuration, security group policies, and automated vulnerability scanning.

DevOps Technician

Quantum Web Services

quantumweb.net

Edinburgh, United Kingdom

August 2019 - May 2020

Supported production Linux servers running Ubuntu and CentOS, managing patches, updates, and security configurations for 40 virtual machines.

Automated repetitive operational tasks using Bash and Python scripts, reducing manual effort by approximately 15 hours per week.

Assisted in setting up Docker containers and implementing basic container orchestration across development environments.

Participated in on-call rotation and responded to production incidents, documenting issues and contributing to post-incident reviews.

EDUCATION

Bachelor of Science in Computer Science

University of Edinburgh

Edinburgh, United Kingdom

Graduated June 2019

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, RDS, S3, IAM, CloudWatch), basic Azure experience

Container and Orchestration: Docker, Kubernetes, Docker Compose

Infrastructure as Code: Terraform, CloudFormation, Ansible

CI/CD Tools: Jenkins, GitLab CI, GitHub Actions

Monitoring and Logging: Prometheus, Grafana, ELK Stack, CloudWatch

Scripting Languages: Bash, Python, YAML

Version Control: Git, GitLab, GitHub

Operating Systems: Linux (Ubuntu, CentOS, RHEL), Windows Server

Databases: PostgreSQL, MySQL, basic MongoDB administration

Other Tools: Nginx, Apache, SSL/TLS certificates, DNS management
