## PROFESSIONAL SUMMARY

Experienced BI Analyst with 8 years building data solutions that drive business decisions across retail, finance, and manufacturing sectors. I've spent the last 4 years designing reporting architectures and mentoring junior analysts while working hands-on with Python and SQL. I prefer tackling messy datasets and translating stakeholder confusion into clear, interactive dashboards rather than sitting in meetings about dashboards.

## WORK EXPERIENCE

Senior BI Analyst

Velocity Insights Ltd

Leeds, United Kingdom

www.velocityinsights.io

March 2022 - Present

Designed and implemented a data warehouse serving 150+ business users across 12 departments, reducing report generation time from 6 hours to 15 minutes through optimised SQL queries and dimensional modelling.

Mentored 3 junior analysts on Power BI best practices and data governance standards, conducting monthly code reviews and pair programming sessions that improved dashboard quality and consistency across the organisation.

Created automated anomaly detection pipeline using Python and Apache Airflow that flags unusual transaction patterns in real-time, helping the fraud team respond 40% faster to suspicious activity.

Managed stakeholder relationships with Finance, Sales, and Operations teams, gathering requirements, presenting findings, and translating complex data insights into actionable business recommendations.

BI Developer

Pinnacle Solutions

Leeds, United Kingdom

www.pinnaclesolutions.co.uk

June 2019 - February 2022

Built 25+ interactive Power BI reports and dashboards used by C-suite executives for monthly business reviews, incorporating DAX calculations and dynamic filtering for KPI tracking.

Developed ETL processes using SQL Server Integration Services to extract data from 8 different source systems including Salesforce, SAP, and Shopify, ensuring daily data refresh with 99.2% uptime.

Optimised existing T-SQL queries that were causing database performance issues, reducing query execution time by 35-55% and enabling analysts to access data 10x faster.

Established data quality framework including automated validation checks and documentation that reduced reporting errors by 60% and improved trust in BI outputs across the business.

BI Analyst

DataCore Systems

Manchester, United Kingdom

www.datacore-systems.net

August 2016 - May 2019

Created SQL queries and stored procedures to extract and transform data from enterprise databases, supporting 40+ active reports used daily by marketing, sales, and operations teams.

Designed Excel-based dashboards and automated reporting using VBA and Power Query, enabling finance managers to complete month-end close reporting 2 days earlier each cycle.

Provided technical support and training to end-users on report functionality, filter parameters, and data interpretation, fielding 20-30 requests per month with 95% resolution on first contact.

Contributed to migration project moving legacy reporting platform to modern cloud infrastructure, performing data validation and regression testing across 150 reports over 6-month period.

## EDUCATION

MSc Data Analytics

University of Leeds

Leeds, United Kingdom

Graduated: September 2016

BSc Information Technology

University of Manchester

Manchester, United Kingdom

Graduated: June 2014

## TECHNICAL SKILLS

Databases: T-SQL, SQL Server, PostgreSQL, MySQL, Snowflake

Programming Languages: Python, VBA, DAX

Business Intelligence Tools: Power BI, Tableau, SQL Server Reporting Services

Data Engineering: Apache Airflow, SSIS, ETL/ELT processes

Cloud Platforms: Microsoft Azure, AWS S3, Snowflake

Other Tools: Excel, Git, Jira, Apache Spark basics

## GITHUB REPOSITORIES

github.com/jpalmer-analytics/power-bi-performance-toolkit - Collection of DAX functions and optimisation patterns for Power BI with performance benchmarking

github.com/jpalmer-analytics/sql-anomaly-detection - Python scripts for time-series anomaly detection in transaction data using isolation forests

github.com/jpalmer-analytics/etl-automation-framework - Reusable SSIS template packages for common data transformation scenarios

github.com/jpalmer-analytics/tableau-sales-dashboard - Sample Tableau workbook demonstrating interactive sales analytics with drill-down capabilities
