## PROFESSIONAL SUMMARY

I'm a backend engineer with 14 years of experience building scalable systems for high-traffic applications. I've spent the last decade working with microservices architectures and have led teams through major infrastructure migrations. I enjoy mentoring junior developers and solving complex database performance problems. Outside of work, I'm interested in distributed systems design and occasionally contribute to internal tooling projects.

## WORK EXPERIENCE

Senior Backend Engineer

CloudVault Systems

www.cloudvault.io

Edinburgh, United Kingdom

March 2021 - Present

Led the redesign of our payment processing system to handle 10x increase in transaction volume, reducing latency by 40 percent

Mentored 4 junior engineers on system design principles and guided them through their first production deployments

Implemented comprehensive monitoring and alerting across 50 microservices, cutting mean time to resolution from 2 hours to 15 minutes

Established code review standards and automated testing practices that reduced production bugs by 35 percent

Staff Backend Engineer

FinanceStream Ltd

www.financestream.co

London, United Kingdom

June 2017 - February 2021

Architected and built a real-time data pipeline using Kafka and PostgreSQL that processes 2 million events daily for financial analytics

Managed database migration from Oracle to PostgreSQL for a mission-critical system serving 500k daily active users with zero downtime

Designed and implemented service-to-service authentication framework using mutual TLS, securing communication across 40 internal services

Reduced cloud infrastructure costs by 28 percent through optimization of Kubernetes deployments and database query performance tuning

Backend Engineer

Innovate Digital Services

www.innovate-digital.net

Manchester, United Kingdom

July 2010 - May 2017

Developed and maintained core REST APIs in Java and Python that powered mobile and web applications for 2 million users

Built automated testing framework that increased code coverage from 42 percent to 78 percent and caught 60 percent of bugs before production

Implemented caching strategy using Redis that improved API response times by 50 percent and reduced database load significantly

Collaborated with DevOps team to containerize legacy applications and migrate infrastructure to AWS, improving deployment frequency from quarterly to weekly

## EDUCATION

Bachelor of Science in Computer Science

University of Edinburgh

Edinburgh, United Kingdom

Graduated: June 2010

## SKILLS

Languages: Java, Python, Go, SQL, Bash

Databases: PostgreSQL, MySQL, MongoDB, Redis, Cassandra

Frameworks and Tools: Spring Boot, Django, Apache Kafka, Docker, Kubernetes

Cloud Platforms: AWS, Google Cloud Platform

Architecture Patterns: Microservices, Event-driven systems, API design, CQRS

Other: System design, Database optimization, CI/CD pipelines, Distributed systems, Linux administration
