PROFESSIONAL SUMMARY

DevOps engineer with 2 years of hands-on experience automating infrastructure and improving deployment pipelines. I started my career fixing server issues and discovered I enjoyed building systems that let developers ship code without worrying about infrastructure. I'm comfortable with AWS, Docker, and Kubernetes, and I'm always learning new tools to make deployments faster and more reliable. I'm looking to grow my skills in cloud architecture and infrastructure as code.

WORK EXPERIENCE

DevOps Engineer

TechFlow Solutions

www.techflow.io

Birmingham, United Kingdom

August 2023 - Present

Maintained and optimised Docker containerised applications across a Kubernetes cluster serving 15 microservices, reducing deployment time from 45 minutes to 12 minutes.

Implemented automated CI/CD pipelines using GitLab CI, enabling developers to deploy changes 20 times per day with zero manual intervention.

Set up comprehensive monitoring and alerting using Prometheus and Grafana, catching production incidents 3 hours faster than previous manual monitoring.

Managed AWS infrastructure including RDS databases, EC2 instances, and S3 buckets, documenting all configurations in Terraform for version control and disaster recovery.

Junior Systems Administrator

DataCore Networks Ltd

www.datacore.co.uk

Solihull, United Kingdom

March 2023 - July 2023

Provisioned and maintained 40 Linux servers running Ubuntu and CentOS, performing regular patching and security updates with zero unscheduled downtime.

Automated routine backup procedures using Bash scripts, saving 8 hours per week of manual work and ensuring 99.9% backup success rate.

Supported internal IT operations including network troubleshooting, Active Directory management, and hardware deployments across two office locations.

Wrote runbooks and documentation for common support tasks, enabling junior team members to resolve 60% of issues without escalation.

Systems Support Technician

Brighton Tech Services

www.brightontech.net

Birmingham, United Kingdom

June 2022 - February 2023

Responded to 25-30 IT support tickets daily from end users, maintaining 95% first-contact resolution rate for hardware and software issues.

Deployed and configured Windows Server 2019 and 2022 environments, including active directory setup and group policy management for 200 users.

Assisted with infrastructure migrations moving legacy systems to cloud environments, learning about AWS fundamentals and IaaS deployment models.

Managed hardware inventory and procurement, tracking 150+ devices and coordinating replacements when equipment reached end of life.

EDUCATION

Bachelor of Science in Computer Science

University of Birmingham

Birmingham, United Kingdom

Graduated: June 2022

Relevant coursework: Operating Systems, Computer Networks, Software Engineering, Database Management, Linux Administration

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, RDS, S3, IAM, VPC), basic Azure knowledge

Containerisation: Docker, Kubernetes, Docker Compose

Infrastructure as Code: Terraform, CloudFormation basics

CI/CD Tools: GitLab CI, Jenkins basics, GitHub Actions

Scripting Languages: Bash, Python (basic), YAML

Monitoring and Logging: Prometheus, Grafana, ELK Stack basics

Version Control: Git, GitLab, GitHub

Databases: MySQL, PostgreSQL, MongoDB basics

Operating Systems: Linux (Ubuntu, CentOS), Windows Server

Other Tools: Nginx, Apache, SSH, systemd, cron jobs

GITHUB REPOSITORIES

kubernetes-deployment-automation - Terraform and Helm charts for deploying multi-tier applications to AWS EKS with autoscaling

docker-microservices-stack - Docker Compose configuration for local development environment with 8 containerised services

ci-cd-pipeline-examples - Collection of GitLab CI and GitHub Actions workflows for Python and Node.js applications

bash-automation-scripts - Utility scripts for server maintenance, log rotation, and automated backups

CERTIFICATIONS

AWS Certified Cloud Practitioner (In Progress)

CompTIA Linux+ (Planned for Q2 2024)
