PROFESSIONAL SUMMARY

I'm a Staff BI Analyst with a decade of experience building data solutions that actually get used. I've spent the last few years leading analytics initiatives at growth-stage companies, moving from hands-on metric development to mentoring junior analysts and owning strategic reporting programs. I'm comfortable diving into complex SQL problems one day and presenting findings to executives the next, and I genuinely enjoy helping teams understand what their data is telling them.

CORE SKILLS

Data Warehousing and Modelling

SQL and Query Optimisation

Business Intelligence Platforms (Tableau, Power BI, Looker)

Python for Data Analysis

Statistics and A/B Testing

ETL and Data Pipeline Development

Database Administration (PostgreSQL, MySQL, Snowflake)

Data Visualisation and Dashboard Design

Leadership and Mentoring

Agile Project Delivery

WORK EXPERIENCE

Staff BI Analyst

DataViz Solutions

Cambridge, United Kingdom

www.dataviz-solutions.co

February 2021 - Present

Led the analytics platform redesign project, migrating 40+ legacy reports to a modern Snowflake-based warehouse with 25% faster query times, directly supporting 120+ daily active users across the organisation.

Established and mentored a team of three junior analysts, creating a documented analytics framework that reduced onboarding time from six weeks to two weeks and improved report consistency.

Designed and implemented an automated anomaly detection system using Python that flagged data quality issues before they reached stakeholders, preventing three critical reporting errors in the first year.

Collaborated with product and finance teams to define KPIs for a new revenue stream, delivering weekly dashboards in Tableau that contributed to a 15% increase in forecast accuracy for quarterly planning.

Senior BI Analyst

InsightHub Analytics

Bristol, United Kingdom

www.insighthub.io

June 2017 - January 2021

Owned the central metrics repository, maintaining 80+ business metrics with clear definitions and SLAs, which became the single source of truth for company-wide reporting.

Built a self-service analytics portal using Looker that reduced time-to-insight for marketing and operations teams from several days to minutes, handling 300+ dashboard views weekly.

Performed statistical analysis on customer behaviour data, identifying three key segments that informed product positioning and contributed to a 22% lift in customer retention.

Managed daily stakeholder reporting, designing executive dashboards that surfaced trends and anomalies proactively, resulting in positive feedback from C-suite executives and improved decision-making velocity.

BI Analyst

Quantify Data

London, United Kingdom

www.quantify-data.net

September 2014 - May 2017

Developed and maintained SQL-based ETL processes that integrated data from seven source systems into a centralised data warehouse, supporting 25+ concurrent users with clean, reliable data.

Created ad-hoc analysis and bespoke reports for business stakeholders, translating business questions into actionable insights that supported product strategy and marketing campaign planning.

Improved report query performance by redesigning database schemas and optimising slow-running queries, reducing average query time by 40% and improving user experience.

Supported the transition from manual reporting to automated dashboards in Tableau, training 30+ users and ensuring successful adoption across the sales and customer success departments.

EDUCATION

MSc Data Science

University of Cambridge

Cambridge, United Kingdom

2013 - 2014

BSc Mathematics with Computer Science

University of Bristol

Bristol, United Kingdom

2010 - 2013
