PROFESSIONAL SUMMARY

Backend engineer with 10 years building scalable systems and mentoring junior developers. I've spent the last few years focused on microservices architecture and reducing infrastructure costs for growing startups. Started my career at a traditional bank, which taught me the importance of reliability, then moved to faster-paced environments where I learned to balance speed with stability. Currently interested in distributed systems and helping teams ship features without breaking production.

WORK EXPERIENCE

Staff Backend Engineer

TechVault Solutions

techvault.io

Liverpool, United Kingdom

March 2022 - Present

Led migration of monolithic Python application to microservices, reducing deployment time from 45 minutes to 8 minutes and enabling independent team deployments.

Designed and implemented event-driven architecture using Kafka, handling 500K messages per day while maintaining sub-100ms latency for critical operations.

Mentored 4 junior engineers through code reviews and pair programming sessions, with 3 progressing to mid-level roles within 18 months.

Optimized database queries and implemented strategic caching layer that reduced AWS costs by 35% annually while improving API response times.

Senior Backend Engineer

DataStream Ltd

datastream.net

Manchester, United Kingdom

June 2019 - February 2022

Built REST APIs and GraphQL endpoints serving 2 million daily active users across 3 different products using Node.js and PostgreSQL.

Established coding standards and implemented automated testing framework that increased test coverage from 42% to 78% across the backend codebase.

Collaborated with DevOps team to containerize applications and implement CI/CD pipelines using Docker and GitLab CI, reducing time-to-production by 60%.

Resolved critical production incident involving memory leaks by implementing comprehensive monitoring and implementing rate limiting that prevented future outages.

Backend Engineer

Barclays Bank PLC

www.barclays.com

Liverpool, United Kingdom

July 2014 - May 2019

Developed Java microservices for payment processing platform handling 50K+ daily transactions with 99.99% uptime requirement.

Implemented comprehensive API documentation and SDK for third-party integrations, reducing onboarding time for partner banks from 3 weeks to 4 days.

Participated in on-call rotation and responded to production issues, maintaining SLA targets and documenting post-incident reviews for continuous improvement.

Modernized legacy payment systems by gradually migrating stored procedures to application-level logic, reducing database load and improving system maintainability.

EDUCATION

University of Manchester

BSc Computer Science

Graduated July 2014

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL, Go

Databases: PostgreSQL, MySQL, MongoDB, Redis

Frameworks and Tools: Django, Spring Boot, Express.js, Gin

Message Queues: Kafka, RabbitMQ

Cloud Platforms: AWS, Google Cloud Platform

DevOps: Docker, Kubernetes, GitLab CI, Jenkins

Concepts: Microservices, REST APIs, GraphQL, Event-Driven Architecture, System Design
