PROFESSIONAL SUMMARY

I'm a data scientist with a year of practical experience building machine learning models and analyzing datasets to solve real business problems. I've worked with Python, SQL, and cloud platforms to deliver insights that have influenced product decisions. I'm particularly interested in developing my skills in deep learning and statistical modeling, and I'm looking for opportunities to work on more complex data challenges where I can grow technically while contributing meaningfully to a team.

TECHNICAL SKILLS

Programming Languages: Python, R, SQL, JavaScript

Data Analysis and Visualization: Pandas, NumPy, Matplotlib, Seaborn, Plotly

Machine Learning: Scikit-learn, TensorFlow, XGBoost, Linear Regression, Classification, Clustering

Databases: PostgreSQL, MySQL, MongoDB

Cloud Platforms: AWS (S3, EC2, SageMaker), Google Cloud Platform

Tools and Platforms: Jupyter Notebook, Git, Docker, Tableau

Statistical Methods: Hypothesis Testing, A/B Testing, Regression Analysis, Time Series Analysis

WORK EXPERIENCE

Data Scientist

DataFlow Analytics

Cambridge, United Kingdom

www.dataflowanalytics.io

June 2023 - Present

Developed and deployed a customer churn prediction model using XGBoost that identified at-risk customers with 82% accuracy, enabling the retention team to proactively engage 150+ high-value clients monthly

Built automated data pipelines in Python to process and clean 5GB+ of daily transaction data, reducing manual reporting time by 40 hours per week

Created interactive Tableau dashboards displaying key business metrics for stakeholder reviews, translating complex datasets into actionable insights for product and marketing teams

Conducted A/B testing analysis on three product features, calculating statistical significance and presenting recommendations that led to two feature launches

Data Analyst Intern

Cambridge Insights Ltd

Cambridge, United Kingdom

www.cambridgeinsights.co.uk

March 2023 - May 2023

Analyzed customer behavior data to identify trends in user engagement patterns across mobile and web platforms using SQL and Python

Supported the development of a recommendation engine by collecting and preprocessing training datasets, achieving 15% improvement in model accuracy

Documented data analysis workflows and created reproducible code repositories for the analytics team to standardize processes

Assisted in preparing weekly performance reports by querying databases and creating visualizations of KPIs for executive leadership

Junior Data Analyst

TechVenture Solutions

Cambridge, United Kingdom

www.techventuresolutions.net

January 2023 - February 2023

Performed exploratory data analysis on customer survey responses and product usage metrics to identify improvement opportunities

Cleaned and validated datasets containing 200,000+ records, documenting data quality issues and proposing solutions to improve data governance

Supported the creation of automated reporting tools using Python scripts that reduced manual data compilation by 20 hours weekly

Collaborated with product managers to understand business requirements and translated them into analytical questions that could be answered through data

EDUCATION

Bachelor of Science in Computer Science with Data Science Specialization

University of Cambridge

Cambridge, United Kingdom

Graduated June 2022

Grade: 2:1 (Upper Second Class Honours)

PUBLIC REPOSITORIES

github.com/jameswright92/customer-churn-prediction

Machine learning project predicting customer churn using gradient boosting techniques with feature engineering and hyperparameter tuning

github.com/jameswright92/ecommerce-data-analysis

Comprehensive analysis of e-commerce transaction data including cohort analysis, RFM segmentation, and visualization of customer lifetime value

github.com/jameswright92/stock-price-forecasting

Time series forecasting model for stock price prediction using ARIMA and LSTM neural networks with performance evaluation metrics

github.com/jameswright92/sentiment-analysis-twitter

Natural language processing project analyzing Twitter sentiment using Naive Bayes and TF-IDF vectorization with data visualization
