## PROFESSIONAL SUMMARY

I'm a data scientist with 2 years of experience building predictive models and analyzing datasets to solve real business problems. I started my career working with Python and SQL on marketing analytics, then moved into machine learning where I've developed models for customer churn and demand forecasting. I'm passionate about turning raw data into actionable insights and enjoy working with teams to understand what questions actually matter to the business.

## WORK EXPERIENCE

Data Science Associate

DataFlow Analytics Ltd

www.dataflowanalytics.io

Glasgow, United Kingdom

June 2023 - Present

Developed a customer churn prediction model using logistic regression that identified 850 at-risk customers, resulting in targeted retention campaigns that recovered GBP 145,000 in annual revenue.

Built automated data pipelines in Python to process and transform raw customer interaction data from multiple sources, reducing manual reporting time by 12 hours weekly.

Created interactive dashboards in Tableau to track key performance metrics for the marketing team, enabling faster decision-making on campaign performance.

Collaborated with the product team to design A/B test frameworks and analyzed experimental results to validate new feature rollouts.

Junior Data Scientist

InsightDrive Solutions

www.insightdrive.co

Edinburgh, United Kingdom

February 2022 - May 2023

Analyzed retail sales data using Python and SQL to identify seasonal trends and built forecasting models that improved inventory planning accuracy by 18 percent.

Performed exploratory data analysis on customer demographics and purchasing behavior, discovering three key customer segments that informed targeted marketing strategies.

Assisted in the development of an employee attrition prediction model, which helped HR identify flight risks with 76 percent accuracy across the organization.

Supported the data engineering team in validating data quality checks and documenting data lineage for compliance reporting purposes.

Data Analyst Intern

Quantico Analytics

www.quanticoanalytics.net

Glasgow, United Kingdom

July 2021 - January 2022

Cleaned and validated large datasets containing over 2 million records, identifying and resolving data quality issues that affected downstream reporting accuracy.

Wrote SQL queries to extract customer transaction data and performed statistical analysis to support business decision-making in the finance department.

Created summary reports and visualizations using Excel and Google Sheets for stakeholder presentations and weekly management reviews.

Assisted in documenting data dictionaries and standard operating procedures for the analytics team.

## EDUCATION

Bachelor of Science in Mathematics with Data Science

University of Edinburgh

Edinburgh, United Kingdom

Graduated: June 2021

Relevant coursework: Statistical Computing, Machine Learning, Linear Algebra, Applied Statistics, Data Visualization, Database Design

## TECHNICAL SKILLS

Programming Languages: Python, SQL, R

Data Analysis and Visualization: Tableau, matplotlib, seaborn, pandas, numpy

Machine Learning: scikit-learn, logistic regression, decision trees, random forests, k-means clustering

Database Management: PostgreSQL, MySQL, Microsoft SQL Server

Tools and Platforms: Google Sheets, Excel, Jupyter Notebook, Git

Statistical Methods: hypothesis testing, regression analysis, A/B testing, time series analysis
